Where is Canada - <https://www.youtube.com/watch?v=I4X5LxTMUMQ>

How Powerful is Canada - <https://www.youtube.com/watch?v=YftGSdS9o9k>

Earth is the third planet from the Sun, the densest planet in the Solar System,

Over 7.3 billion humans live on Earth and depend on its biosphere and minerals for their survival.

The **Solar System** comprises the Sun and the objects that orbit it, either directly or indirectly. Of those objects that orbit the Sun directly, the largest eight are the planets that form the planetary system around it, while the remainder are significantly smaller objects, such as dwarf planets and small Solar System bodies such as comets and asteroids. Of those that orbit the Sun indirectly, two are larger than the smallest planet.

The **biosphere** is the global sum of all ecosystems. It can also be termed as the zone of life on Earth, a closed system (apart from solar and cosmic radiator and heat from the interior of the Earth), and largely self-regulating. By the most general biophysiological definition, the biosphere is the global ecological system integrating all living beings and their relationships, including their interaction with the elements of the lithosphere, geosphere, hydrosphere, and atmosphere.
